

ABSTRACT

[0052] A computer system executing a Web server program is disclosed. The computer system includes a plurality of virtual hosts accessible using connection requests passed over a computer network. Each of the virtual hosts are identified by a corresponding virtual host identifier includable in a connection request. Also included in the system is a plurality of executable modules, each defining a predetermined function. Also included in the system is a plurality of configuration sub-files corresponding to the virtual hosts, each defining which of the executable module functions are usable by a corresponding one of the virtual hosts.
